Bachelor of Science in Information Technology

Chapter I
INTRODUCTION

1.1 Background of the Study

Farming is one of the backbone in our society. For generations, Filipino farmers have dedicated their lives to improve the land, and provide food to the communities and sustaining families through the fruit of their labor. Agriculture in the Philippines is not just livelihood but also our identity and sacrifices that have been passed down to the next generation.

However, there's a growing gap between the older generation and young generation of Filipino farmers. Due to the rapid growth and more opportunities in our society today, many young people find it more appealing, promising job offers. Due to these circumstances, young people tend to see farming as a burdensome, undesirable way of living because of long hardworking hours which results in physical stress and mental stress. They also don't want to understand the sacrifices their parents or grandparents have made for them.

This generational gap creates a divide in the cultural and emotional aspects of being a farmer, rooted in the fading appreciation for hard work, sacrifice, and connection to the land that the older generation has long been practicing. If left unaddressed, this may gradually erode our agricultural culture and weaken our identity as Filipino farmers.

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

In response to this issue, this capstone project proposes the creation of "ANI". a 2D animated short film that tells a story of a young person and her farmer father. Through visual storytelling, the film aims to bridge the emotional gap between generations by portraying the quiet, unspoken sacrifices behind farming – and helping audiences, particularly the Filipino youth, develop a deeper appreciation for what it truly means to harvest.

1.2 Statement of the Problem

This project seeks to address the following problems:

1. The young generation views farming as a burden rather than understanding it as a form of sacrifice and love for family.
2. Current media lacks relatable stories that connect with the emotions of young people regarding the farming lifestyle.
3. There is a disconnect between the lived realities of farming communities and the values and priorities of the younger generation that live in the city.

1.3 Objectives of the Study

1.3.1 General Objective

The general objective of this project is to produce "ANI," a 2D animated short film that portrays the story of a young person and their farmer father, with the goal of raising social awareness about the sacrifices behind farming and bridging the generational gap between Filipino youth and agricultural culture.

1.3.2 Specific Objectives

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

1. Develop a 2D animated short film with a complete narrative arc within a five-minute runtime that effectively communicates the theme of generational disconnect in Filipino farming communities.
2. Create visually compelling character designs and environmental storytelling that authentically represent the rural Filipino farming setting.
3. Use animation as a medium for cultural storytelling that raises awareness and appreciation for the Filipino farming way of life among general Filipino viewers, particularly the youth.
4. Produce a short film that evokes emotional reflection on the value of sacrifice, family, and the labor behind everyday survival.

1.4 Scope and Delimitation

This project covers the full production of a 2D animated short film titled "ANI," including the development of the story concept, character design, storyboarding, animation, sound design, and final editing. The film is approximately five minutes in length and is designed for general Filipino viewers, with a focus on raising awareness among the younger generation about the realities and sacrifices of farming life in rural Philippines.

The film centers on two characters - a farmer father and his child - set to the rural area in the Philippines. The narrative focuses on the culture and social context of Ilonggo life in the Visayas Region.

The project does not cover the development of any interactive system, web application, or software platform. It is also limited to a single short film and does not include a full-length feature film or a series. The film will not serve as a direct intervention

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

or solution to the agricultural challenges faced by farmers, but rather as a cultural and awareness-raising media output.

1.5 Significance of the Study

The production of "ANI" carries significance for multiple groups of people and sectors of society:

General Filipino Viewers - The film offers a relatable and emotionally honest portrayal of rural Filipino life. It invites viewers – especially the youth – to reflect on the sacrifices behind the food on their table and the people who make it possible.

Filipino Farming Communities - The film serves as a form of cultural representation for farmers whose stories are rarely told in mainstream media. It affirms the dignity and importance of their work and their daily sacrifices.

Filipino Youth - By presenting farming through an emotional and visual narrative, the film has the potential to help the young Filipinos develop a deep understanding, appreciation and empathy to the old people and recognize the importance of agricultural traditions.

Researchers and Future Filmmakers - This project contributes to Filipino animation and storytelling. It can serve as a reference for future students and creators who wish to use animation as a tool for social awareness.

The Institution - This capstone project demonstrates the capacity of PHINMA University of Iloilo's IT students to apply digital arts

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

and multimedia skills in the production of culturally meaningful and socially relevant animated content.

1.6 Definition of Terms

The following terms are defined as they are used in this study:

2D Animation - Form of animation that creates movement in a two-dimensional space. Characters and environments are designed and animated using flat visuals, typically produced through digital software.

Anak - The Filipino word for "child." In the film, Anak refers to the young teenage girl who is the main character of the story. She represents the younger generation of Filipinos who struggle to understand and appreciate the sacrifices of their parents.

Ani - An Ilonggo/Hiligaynon word meaning "harvest." In this project, it refers to both the title of the animated short film and the central theme of reaping what one has sacrificed.

Animated Short Film - A brief cinematic work, typically under ten minutes in length, that uses animation as its primary medium to tell a story or convey a message.

Cultural Storytelling - The practice of using narrative - whether through film, literature, or other media - to communicate the values, traditions, and lived experiences of a particular culture or community.

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

Generational Gap - The difference in values, perspectives, and priorities between older and younger generations, often resulting in misunderstanding or disconnect between the two.

Hiligaynon / Ilonggo - A regional language spoken primarily in the Western Visayas region of the Philippines, particularly in Iloilo. It is the primary cultural and linguistic context of this film.

Slice of Life - A genre of storytelling that portrays realistic, everyday experiences of ordinary people without dramatic or fantastical elements. It focuses on authentic human emotion and relatable situations.

Social Awareness - A conscious understanding of the social conditions, struggles, and realities experienced by different groups within a society, often cultivated through education, media, or art.

Tatay - A Filipino word meaning "father." In this project, Tatay refers to the farmer father character in the film "ANI."

Visual Storytelling - The use of visual elements such as imagery, color, motion, and composition to convey a narrative or emotional message, often with minimal reliance on dialogue.

Chapter II

REVIEW OF RELATED LITERATURE AND STUDIES

2.1 Foreign studies

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

**2.1.1 The Dimensions of Youth Attitudes Towards Agriculture
as a Profession**

A study by Kamondetdacha (2021) examined the attitudes of young people toward agriculture as a profession in Thailand. The study focused on understanding the factors that influence how youth perceive farming and agricultural careers. Using surveys and content analysis, the researcher gathered information from university students who came from farming families. The study sought to determine why some young people remain interested in agriculture while others choose different career paths.

The findings revealed four major dimensions that shape youth attitudes toward agriculture: professional recognition, financial benefits, professional practice, and quality of life. Among these factors, professional recognition was found to have the strongest influence on positive perceptions. Young people were more likely to appreciate farming when they viewed it as a respected and valuable profession within society.

On the other hand, negative attitudes toward farming were often associated with concerns about income stability, difficult working conditions, and limited opportunities for advancement. Many respondents expressed uncertainty about pursuing agriculture as a long-term career because they believed other professions offered greater financial security and social status.

The study emphasizes the importance of improving the public image of agriculture and recognizing farmers for their contributions to society. These findings are relevant to the present study because they demonstrate how societal perceptions influence the younger generation's willingness to appreciate and engage in farming. The research supports the need for educational

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

and media initiatives that promote a more positive understanding of agriculture among youth.

The study is relevant to the present project for a reason that it highlights how societal perceptions influence the attitudes of young people toward farming. Similar to the findings of the study, the proposed 2D animation aims to address the negative perceptions surrounding agriculture by portraying the sacrifices, dedication, and perseverance of a farmer through the experiences of a father and his daughter. By presenting a relatable and emotional story, the project seeks to encourage young viewers to develop a greater appreciation for farmers and the important role they play in society.

Reference:

Kamondetdacha, R. (2021). *The dimensions of attitude and their attributes with regard to youths' attitudes towards agriculture as a profession*. Journal of Population and Social Studies, 29, 435-449. <https://doi.org/10.25133/JPSSv292021.027>

2.1.2 Youths' Perceptions and Aspirations Towards Participating in the Agricultural Sector

A study conducted by Henning, Matthews, August, and Madende (2022) explored the perceptions and aspirations of young people toward participation in the agricultural sector in South Africa. The research aimed to determine whether youth perceptions,

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

aspirations, and access to resources affect their willingness to engage in agricultural activities. The study recognized that agriculture plays a significant role in employment and food security, particularly in rural communities.

The researchers found that many young people were hesitant to pursue careers in agriculture because they perceived the sector as physically demanding and less attractive than urban employment opportunities. In addition, limited access to resources such as land, financing, and agricultural support services discouraged youth participation. These challenges contributed to declining interest in farming among younger generations.

The study also revealed that personal aspirations strongly influence career choices. Many young individuals associated success with professional careers in cities rather than agricultural work in rural areas. As a result, agriculture was often viewed as a secondary option despite its importance to economic development and food production.

The researchers concluded that improving youth participation in agriculture requires addressing both practical barriers and negative perceptions. They recommended increasing access to resources, providing agricultural education, and promoting positive representations of farming. These findings relate to the present study because they highlight the growing disconnect between young people and farming communities, reinforcing the need for initiatives that foster appreciation for the sacrifices and contributions of farmers.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

The study supports the present project by showing that many young people view agriculture as less attractive compared to other career opportunities. This finding reflects the growing disconnect between younger generations and farming communities. Through the story of a farmer and his daughter who continue to persevere despite various challenges, the proposed animation seeks to bridge this gap by helping audiences understand the realities of farming life, the sacrifices involved, and the values of hard work, resilience, and family that are often overlooked.

Reference:

Henning, J. I. F., Matthews, N., August, M., & Madende, P. (2022). *Youths' perceptions and aspiration towards participating in the agricultural sector: A South African case study*. Social Sciences, 11(5), 215. <https://doi.org/10.3390/socsci11050215>

2.2 Local studies

2.2.1 Perception of Filipino Youth towards Agriculture: Eradicating Agri Stereotypes through Education

A study by Secretario (2021) looked into how Filipino youth perceive agriculture and what kinds of stereotypes they hold about it. The research found that many young Filipinos describe farming

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

as a "poor man's profession," "dirty work," and something "only for those who are not smart enough." These perceptions are not just personal opinions. They reflect a wider cultural attitude that has been growing among the younger generation, where farming is seen as something to escape from rather than something to be proud of.

This study is directly relevant to the film "ANI" because it confirms the real-world problem the film is trying to address. The character of Anak in the film mirrors this exact mindset of a young child who sees farming as exhausting and meaningless, without fully understanding the sacrifices behind it. The findings of Secretario (2021) strengthen the argument that there is a genuine need for media content that challenges these stereotypes

Reference:

Secretario, (2021). Perception of Filipino Youth towards Agriculture: Eradicating Agri Stereotypes through Education. ResearchGate: <https://www.researchgate.net/publication/351226934>

2.2.2 Behind the Lens: A Deconstruction of the Role of Filipino Films in Shaping Philippine Culture

Capul et al. (2025) carried out on how Filipino films influence and shape cultural values among its viewers. The research analyzed several mainstream Filipino films and found that local cinema is a powerful tool for communicating cultural identity, social awareness, and shared Filipino values such as family, respect for elders, and community. The study also noted that Filipino films often reflect real social issues faced by ordinary people, and

that these portrayals play a significant role in shaping how viewers – especially the youth – understand their own society.

This study supports the use of short-form animation as an effective way to communicate important social issues. Through storytelling and visual presentation, the project can help raise awareness about the struggles and sacrifices of Filipino farmers. The animated film aims to provide viewers with a better understanding of real Filipino experiences while encouraging reflection on important cultural values such as hard work, perseverance, and self-sacrifice.

Reference:

Capul et al. (2025). Behind the Lens: A Deconstruction of the Role of Filipino Films in Shaping Philippine Culture. *Psych Educ*, 46(6):742-755.

<https://www.researchgate.net/publication/395372894>

2.2.3 Social Advocacy Cinema: The Mode of Production by Alternative Multimedia Collectives

This study looked at how alternative Filipino filmmakers and multimedia groups used films to promote social awareness from 2000 to 2019. The researchers found that groups such as Kodao Productions and Tudla Productions created films that gave attention to the experiences of marginalized sectors, including farmers, workers, and other communities that are often ignored by mainstream media and the government. The study also showed that films with a social purpose can help start conversations, increase awareness, and encourage viewers to think about the issues happening around them.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

This study is related to "ANI" because both use visual storytelling to share stories that are not often seen or heard. The project focuses on showing the everyday challenges and sacrifices of Filipino farmers and helping viewers understand their situation better. Even though *ANI* is an animated short film and not a documentary, it has the same goal of raising awareness and encouraging people to develop empathy through storytelling.

Reference:

Social Advocacy Cinema: The Mode of Production by Alternative Multimedia Collectives. Academia.edu.
https://www.academia.edu/49058944/Social_Advocacy_Cinema_The_Mode_of_Production_by_Alternative_Multimedia_Collectives

2.3 Related Literature

2.3.1 Filipino Farming Culture and Identity

Farming has always been deeply tied to Filipino culture and identity. For generations, Filipino families in rural communities have built their lives around agriculture – not just as a source of income, but as a way of living that carries its own values, traditions, and sense of purpose. Palis (2006) noted that Filipino farming communities have a strong culture of shared labor and collective decision-making, where farming is not just an individual act but a communal one rooted in local customs and relationships.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

This cultural dimension of farming is something that is often missing in the way young Filipinos see agriculture today. When farming is reduced to just physical labor and low income, its deeper cultural meaning gets lost. The film "ANI" attempts to recover this meaning by showing farming not as a job, but as an expression of a father's love and sacrifice for his family – something that is deeply Filipino at its core.

Reference:

Palis, F. G. (2006). The role of culture in farmer learning and technology adoption: A case study of farmer field schools among rice farmers in central Luzon, Philippines. ResearchGate. <https://www.researchgate.net/publication/226653224>

2.3.2 The Generational Gap in Philippine Agriculture

One of the most pressing concerns in Philippine agriculture today is the growing gap between the older generation of farmers and the younger generation of Filipinos. According to a report by Manila Bulletin (2025), the average age of Filipino farmers is currently between 49 to 50 years old. This means that the farming population is aging, and not enough young people are stepping in to continue the tradition. The Department of Agriculture has acknowledged this problem and has launched programs to try to attract younger Filipinos back to farming.

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

The problem goes beyond numbers, though. Mercado and Osbahr (2022) found that many Filipino youth are discouraged from farming because of the widespread negative perception that farmers are poor, underpaid, and unappreciated. This attitude, combined with the appeal of city life and social media, makes it harder for farming communities to pass on their knowledge and values to the next generation. The film "ANI" directly addresses this gap by putting a human face on farming – showing not just the hardship, but the love and meaning behind it.

References:

Manila Bulletin. (2025, January 7). The Young Pinoy and Agriculture: Bridging the gap. <https://mb.com.ph/2025/1/7/the-young-pinoy-and-agriculture-bridging-the-gap-1>

Mercado, K. M. P., & Osbahr, H. (2023). Feeding the Future: Knowledge and Perceptions of the Filipino Youth Toward Agriculture. Asian Journal of Agriculture and Development, 20(2): 31-50. <https://doi.org/10.37801/ajad2023.20.2.3>

2.3.3 Youth Disinterest and the Future of Filipino Farming

A piece published in SunStar Davao titled "Disenchantment of Youth in Agriculture" (2019) discussed how farming in the Philippines is increasingly seen by young people as a dying profession. The article pointed out that young Filipinos tend to be drawn toward quick money and city-based careers, while farmers – who are among the hardest working people in the country – remain among the poorest. This creates a situation where farming is not just economically unattractive but also emotionally and socially undervalued.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

This piece of literature connects directly to the emotional core of "ANI." The story does not try to argue that farming is easy or financially rewarding. Instead, it focuses on something more honest: the quiet dignity of a father who keeps working despite everything, and a child who slowly learns to see that dignity for what it really is. By acknowledging the real hardships of farming while also honoring its deeper meaning, the film hopes to speak to young Filipino viewers in a way that is truthful and emotionally resonant.

Reference:

SunStar Davao. (2019, December 10). Disenchantment of youth in agriculture.PressReader.

<https://www.pressreader.com/philippines/sunstar-davao/20191210/281719796463183>

2.4 Synthesis of the Reviewed Literature

The studies and literature reviewed in this chapter all point to the same reality: Filipino farming culture is at risk of being forgotten by the younger generation. Research shows that many young Filipinos hold negative views of farming, seeing it as a dirty, low-paying, and undesirable way of life. At the same time, the country's farming population is aging, and fewer young people are choosing to take over from their parents and grandparents.

What is missing from most existing responses to this problem is a focus on the emotional and cultural aspects of farming. Most programs and studies focus on making farming more profitable or technologically advanced to attract the youth. But very few address

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

the deeper disconnect – the lack of appreciation for what farmers have gone through, what they have sacrificed, and what their work truly means to their families and communities.

This is where “ANI” steps in. The film does not try to fix the economics of farming. What it tries to do is tell a story that makes people feel something – a story that shows the human side of a farmer and helps younger viewers understand and appreciate the sacrifices behind the harvest. By using animation and visual storytelling, the film reaches its audience in an accessible, emotional, and culturally grounded way rooted in the Filipino experience.

CHAPTER III

METHODOLOGY

3.1 Research Description

This study focused on the creation of “ANI,” a 2D animated short film that tells the story of a farmer father and his child who slowly comes to understand the sacrifices behind farming. The film explores themes of generational disconnect, family sacrifice, and the fading appreciation of the younger generation toward agricultural life. The project drew inspiration from the quiet, emotional style of slice-of-life storytelling and aimed to deliver a meaningful and culturally grounded narrative that balances visual simplicity with emotional depth.

The research involved studying different aspects of animation production, including character design, background creation, scene planning, storyboarding, and audience response. By applying 2D animation techniques and visual storytelling principles, this study aimed to contribute to the use of digital animation as a tool for cultural awareness and social advocacy in the Philippine context.

3.2 Research Methodology

This study used a mixed-method approach combining **qualitative** and **quantitative** research to understand the animation process and measure the film's effect on its audience.

Qualitative Research:

1. Observation of farming communities and family dynamics to better understand the emotional and cultural context behind the story of "ANI."
2. Review of related animated works and Filipino films with similar themes to study how emotions and cultural values were expressed through visual storytelling.
3. Interviews with individuals from farming backgrounds to gather authentic insights about the relationship between farmers and their families.

Quantitative Research:

1. Surveys distributed to a sample audience to measure their opinions on the animation quality, story clarity, and emotional impact of the film.
2. Ratings collected to assess how well the audience related to the characters and understood the film's central message about sacrifice and appreciation.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

3.3 Research Design

The design of this research followed a creative development process that guided the production of the animated short film "ANI" from the planning stage to the final output:

1.Pre-production: This stage involved developing the story concept, writing the script, designing the characters, and creating the storyboard. These steps helped set the overall tone, visual style, and narrative flow of the animation.

2.Production: This stage focused on bringing the animation to life. Character animations were created frame by frame using Adobe Animate, while background environments were modeled and rendered using Blender 3D. All scenes, movements, and visual elements were completed during this phase.

3.Post production: In this final stage, sound effects, background music, and voice elements were added to the animation. Scene editing and final adjustments were made using Adobe Animate to ensure smooth timing, proper pacing, and overall visual coherence of the film.

4.Audience Testing: The completed film was presented to a panel for evaluation. Feedback from the audience was gathered and used to refine and improve the final output.

3.4 Collection Methods

1.Storyboarding: A detailed storyboard was created to lay out the sequence of scenes and visualize the flow of the story. The storyboard served as the main planning tool to organize the animation process and ensure that the narrative direction of "ANI" was clear before production began.

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

2.Character and Background Design: Character designs and background references were developed during pre-production to establish the visual identity of the film. Characters were designed with expressive features to support emotional storytelling, while backgrounds were built in Blender 3D to create a rural Philippine farming environment that felt authentic and visually immersive.

3.Survey and Feedback Collection: After the film was completed, surveys were distributed to gather audience feedback on the quality of the animation, the clarity of the story, and the emotional impact of the film. This data was used to evaluate whether the film successfully communicated its intended message.

3.5 Tools for Analysis

1.Adobe Animate: The primary animation software used to create the 2D characters, movements, and scene sequences of the film. Adobe Animate allowed the team to produce detailed frame-by-frame animation with precise control over timing and character expressions.

2.Blender 3D: Used specifically for designing and rendering the background environments of the film. Blender's 3D modeling and rendering tools allowed the team to create realistic and detailed rural backgrounds that matched the tone and setting of the story.

3.Digital Drawing Pads: Used by the animation team to draw and design characters, scenes, and assets digitally. The drawing pads allowed for more natural and precise hand-drawn artwork compared to using a standard mouse or trackpad.

3.6 Selection Process of Digital Tools

The team chose Adobe Animate as the primary animation software because it is widely used in the 2D animation industry and provides

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

the tools needed for creating smooth, frame-by-frame character animation. It supports layered workflows that make it easier to manage complex scenes while maintaining consistent visual quality throughout the film.

Significance of Adobe Animate:

1. Adobe Animate offers a wide range of tools for creating detailed 2D character animation, including frame-by-frame drawing and timeline control.
2. It is a professional-grade software that is recognized in the animation industry, which helped ensure the quality of the final output.
3. The student version made it accessible for the team within a reasonable budget while still providing full production features.

Blender 3D was selected for background design because it is a free and open-source software that offers powerful 3D modeling and rendering capabilities. Since the film uses 3D-rendered backgrounds combined with 2D character animation, Blender provided the right tools to create realistic and detailed environments without requiring additional software costs.

Significance of Blender 3D:

1. Blender is a free and open-source tool that removes the need for additional software costs, making it ideal for a student capstone project.
2. It provides professional-level 3D modeling and rendering tools that allowed the team to build detailed rural farming backgrounds for the film.
3. Blender's rendering engine produced high-quality visual outputs that complemented the 2D animation style of the characters.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

3.6 Project Management

Title: ANI – Capstone Project

The objective of this capstone project “ANI” is to create a 2D animated short film that connects with Filipino viewers on an emotional and cultural level. The project will go through three main phases: pre-production, production, and post-production, with a total production period running from May 2026 to October 2026.

Phase	Duration	Period
Pre-production	1 Month	May 2026
Production	4 Months	June – September 2026
Post-production	1 Month	October 2026

1. Pre-production Phase (1 Month – May 2026)

- Concept Development (1 week) – The team brainstormed and finalized the story idea, themes, and characters for the animated short film.
- Scriptwriting (3 days) – The full script and dialogue for the film were written based on the approved story concept.
- Character Design (1 week) – Final character designs were created, including the visual appearance, expressions, and clothing of Tatay and Anak.
- Storyboarding (1 week) – A complete storyboard was developed to visualize the scene flow, camera angles, and overall layout of the animation.

2. Production Phase (4 Months – June – September 2026)

- Background Design (1 month) – Rural farming environments and all scene backgrounds were modeled and rendered using Blender 3D.
- Character Animation (2 months) – All character movements, expressions, and actions were animated frame by frame using Adobe Animate.

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

- Scene Assembly (1 month) – Animated characters were combined with 3D backgrounds and all scenes were assembled into a complete sequence.

3. Post-production Phase (1 Month – October 2026)

- Sound Design (2 weeks) – Free music assets and sound effects were selected and integrated into the film to enhance the emotional tone of each scene.
- Final Editing (1 week) – All scenes were reviewed and edited for proper timing, pacing, and visual consistency.
- Audience Testing and Final Revisions (1 week) – The completed film was presented to the panel for evaluation and final adjustments were made based on feedback received.

3.7 Tangible and Intangible Benefits

Tangible Benefits:

- 1.The finished animated short film can be uploaded to online platforms such as YouTube, Facebook, and other social media sites, making it accessible to a wide Filipino audience.
- 2.The film can be used as an educational or awareness material in schools, community events, and agricultural organizations.
- 3.The project builds the team's technical skills in 2D animation, 3D background design, and film production – skills that are directly applicable in future professional work.
- 4.The project can open future opportunities for the team such as collaborations, freelance work, or employment in the animation and creative industries.

Intangible Benefits:

- 5.The project develops the team's creativity, collaboration, and problem-solving skills through the experience of working together on a full animation production.

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

6. Completing the film gives the team a strong sense of personal accomplishment and pride in producing a meaningful and culturally relevant work.

7. The film contributes to social awareness by telling the story of Filipino farmers in a way that encourages empathy and appreciation among younger audiences.

3.8 Proposed Budget

1. Pre-production Phase:

Concept Development: ₱300

Scriptwriting: ₱500

Storyboarding (printing): ₱800

Character Design: ₱1,500

2. Production Phase:

Digital Drawing Pads (2 units x ₱700): ₱1,400

Background Design (Blender – free software): ₱0

Animation Software – Adobe Animate (Student Version): ₱0

Food and Miscellaneous (team meetings): ₱1,000

3. Post-production Phase:

Sound Effects and Music (free assets): ₱0

Final Editing and Rendering: ₱500

Total Proposed Budget: ₱6,000

3.9 Target Audience, Marketing, and Return on Investment

Target Audience

The primary audience of “ANI” is the general Filipino public, with a focus on the following groups:

PHINMA UNIVERSITY OF ILOILO

College of Information Technology Education

Bachelor of Science in Information Technology

Filipino Youth (13-25 years old) – The main audience the film is trying to reach. Young Filipinos who may have grown up in the city and have little understanding of farming life. The film aims to build empathy and appreciation for the sacrifices of the older generation.

Families with Agricultural Backgrounds – Families who have direct experience with farming will find the story of Tatay and Anak deeply relatable and emotionally resonant.

Students and Educators – The film can be used as a discussion material in schools and universities to spark conversations about Filipino farming culture, family sacrifice, and generational values.

Marketing Strategy

Social Media Promotion – Upload the film and promotional clips on platforms such as Facebook, YouTube, TikTok, and Instagram to reach a wider Filipino audience.

Online Screenings – Submit "ANI" to student film festivals and online screenings to gain visibility and reach audiences beyond the university.

Community Engagement – Partner with local farming organizations or agricultural offices in Iloilo to screen the film in community events and awareness campaigns.

Collaboration – Reach out to content creators, student organizations, and advocacy groups that focus on Filipino culture and agriculture to help promote the film.

Return on Investment (ROI)

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology

Fixed Expenses

Food and Transportation: ₱1,000 estimated total

Variable Expenses

Digital Drawing Pads: ₱1,400

Printing and Materials: ₱800

Software and Tools (Adobe Animate Student, Blender Free): ₱0

Miscellaneous Production Costs: ₱1,300

Total Expenses: ₱4,500

Potential Revenue Sources

YouTube Ad Revenue (estimated): ₱2,000

Licensing to Educational Institutions: ₱3,000

Sponsorship and Partnership Revenue: ₱1,500

Film Festival Prizes and Recognition (estimated): ₱2,000

Total Estimated Revenue: ₱8,500

Total Expenses: ₱4,500

Estimated ROI: ₱4,000 net return

While “ANI” is primarily a cultural and social awareness project rather than a commercial one, the estimated ROI reflects the potential value the film can generate through digital distribution, educational licensing, and recognition in student film competitions. The greater return, however, lies in its intangible impact – the awareness it builds, the conversations it starts, and the appreciation it fosters for Filipino farming culture among its audience.

PHINMA UNIVERSITY OF ILOILO
College of Information Technology Education
Bachelor of Science in Information Technology
